Hi Ron,

I have submitted the basic functionality including the UI for this project. This should be available to you in this morning's build. Please start testing and let me know about any bugs, comments or questions that you may have. Please play with it without any write ups from me for now. This should help the user figure out on their own without any manuals. I will incorporate any suggestions that you may come up with.

Also, it will be worth while for you to talk to Mark afterwards.

There are some limitations in that some mates may get deleted unnecessarily. Also, I do not have confirmation for deletes nor UNDO yet.

Thanks.

Jyoti

Ron Bates is the QA person for 2052.

Ron: make sure you talk to Jyoti to get a good understanding of the scope of the project/limitations/areas to test etc.

Graham

Since Jyoti will be taking an extended leave starting 1/10, I want to make sure that this

project is in good shape before he goes. So when Jyoti is done (he has about 4 days left) I would like you all to test it very thoroughly and get Jyoti any issues as soon as possible - so he has time to address them. If tradeoffs need to be made, I would prefer more stability to more functionality.

Thanks
